

INTEGRATED
SYSTEM MONITORING
THE RESTRICTED AREA
AT THE TUNNELS
& HIGHWAYS EXITS

Developing Cities Smarter Than Ever

EXIT-I

The development of modern cities through safe and smart road networks which form the cornerstone of building smart cities. With the availability of innovative ideas and the right investment of the latest technologies, we provide a sophisticated, safe and intelligent society.

EXIT-I

Integrated system monitoring the restricted area at the tunnels and highways exits, which in case of traffic congestion reckless drivers usually enter bypassing the traffic line.

Cameras monitor the boundaries of the planned area. If any vehicle enters the limits of the specified area, the camera takes the photo of the vehicle's plate number and issues a violation against the driver.

Records reckless behaviour of drivers and contributes to increasing traffic awareness.

Automated system controlled centrally provides various traffic solutions across all areas inside and outside the city.

EXIT-I Components

- ▶ **Smart AI Cameras:** high resolution cameras to cover chevron area
- ▶ **LTE Router:** industrial LTE communication router with double SIM
- ▶ **Processing Unit:** industrial full compact unit with built-in Artificial Intelligence software analysing the full area
